NIVLO

PLATFORM OVERVIEW

Your team's files, found in seconds and delivered with one link.

Nivlo is the platform where companies organise, find and deliver their digital materials: photos, video, design and documents.

PURPOSE

Why Nivlo exists

THE PROBLEM

Scattered materials

A company's photos, footage and documents end up in personal drives, emails, WeTransfer and USB sticks. People lose time looking for the right version and sending the same files again.

THE PURPOSE

Time saved, in two ways

Teams work more efficiently because they:

1. **find their files easily**;
2. **pass them on** with a share link.

WHO IT IS FOR

Teams that handle a lot of material

Companies and marketing departments that constantly receive, organise and deliver materials, together with internal teams, agencies and external suppliers.

Principles: complete separation between companies · access controlled by roles and sections · reliability for clients who work in the platform every day

WORKFLOW

How a file moves through Nivlo

From the first upload to delivery to the client, everything happens in the same space.

1

Collect

Upload, an upload link for clients and suppliers, or a direct import from a WeTransfer, Dropbox or Google Drive link.

2

Organise

Sections for departments, brands or clients. Public or private folders.

3

Tag

Tags on one file, a selection or the whole batch you just uploaded. Optionally automatic, with AI.

4

Find

Global search with filters, in the app or through AI agents.

5

Review

Timecoded comments and comments on any file type, new versions.

6

Deliver

One controlled link whose content you can update at any time.

7

Follow

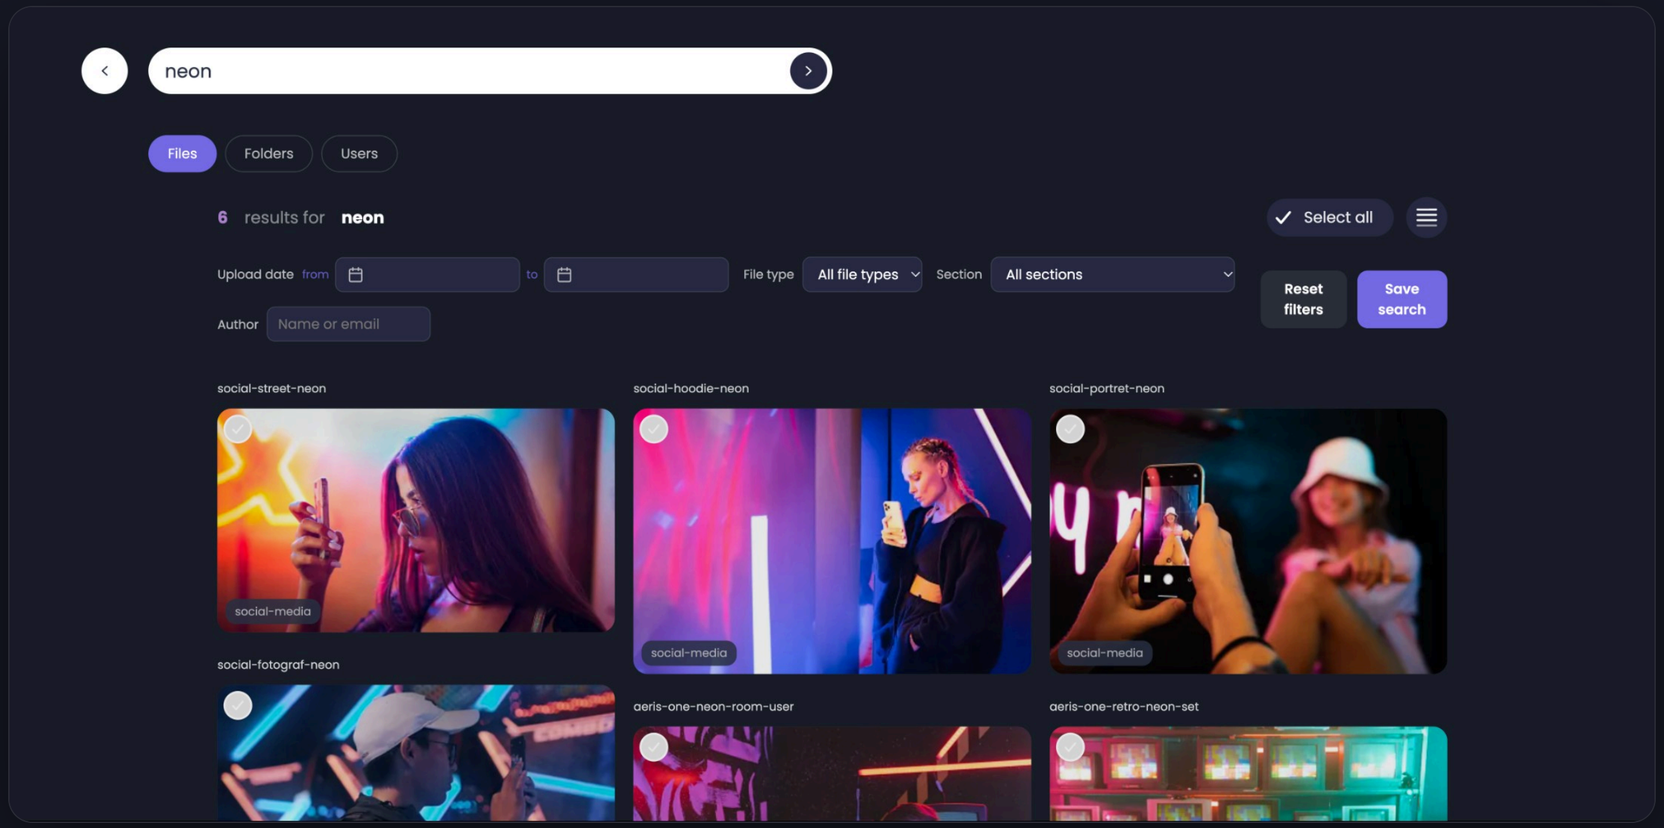

Notifications for uploads, comments and expiring links.

1 · SEARCH

Find any file in seconds

Semantic search with vector indexing: find images and video by what is in them, not just by their name.

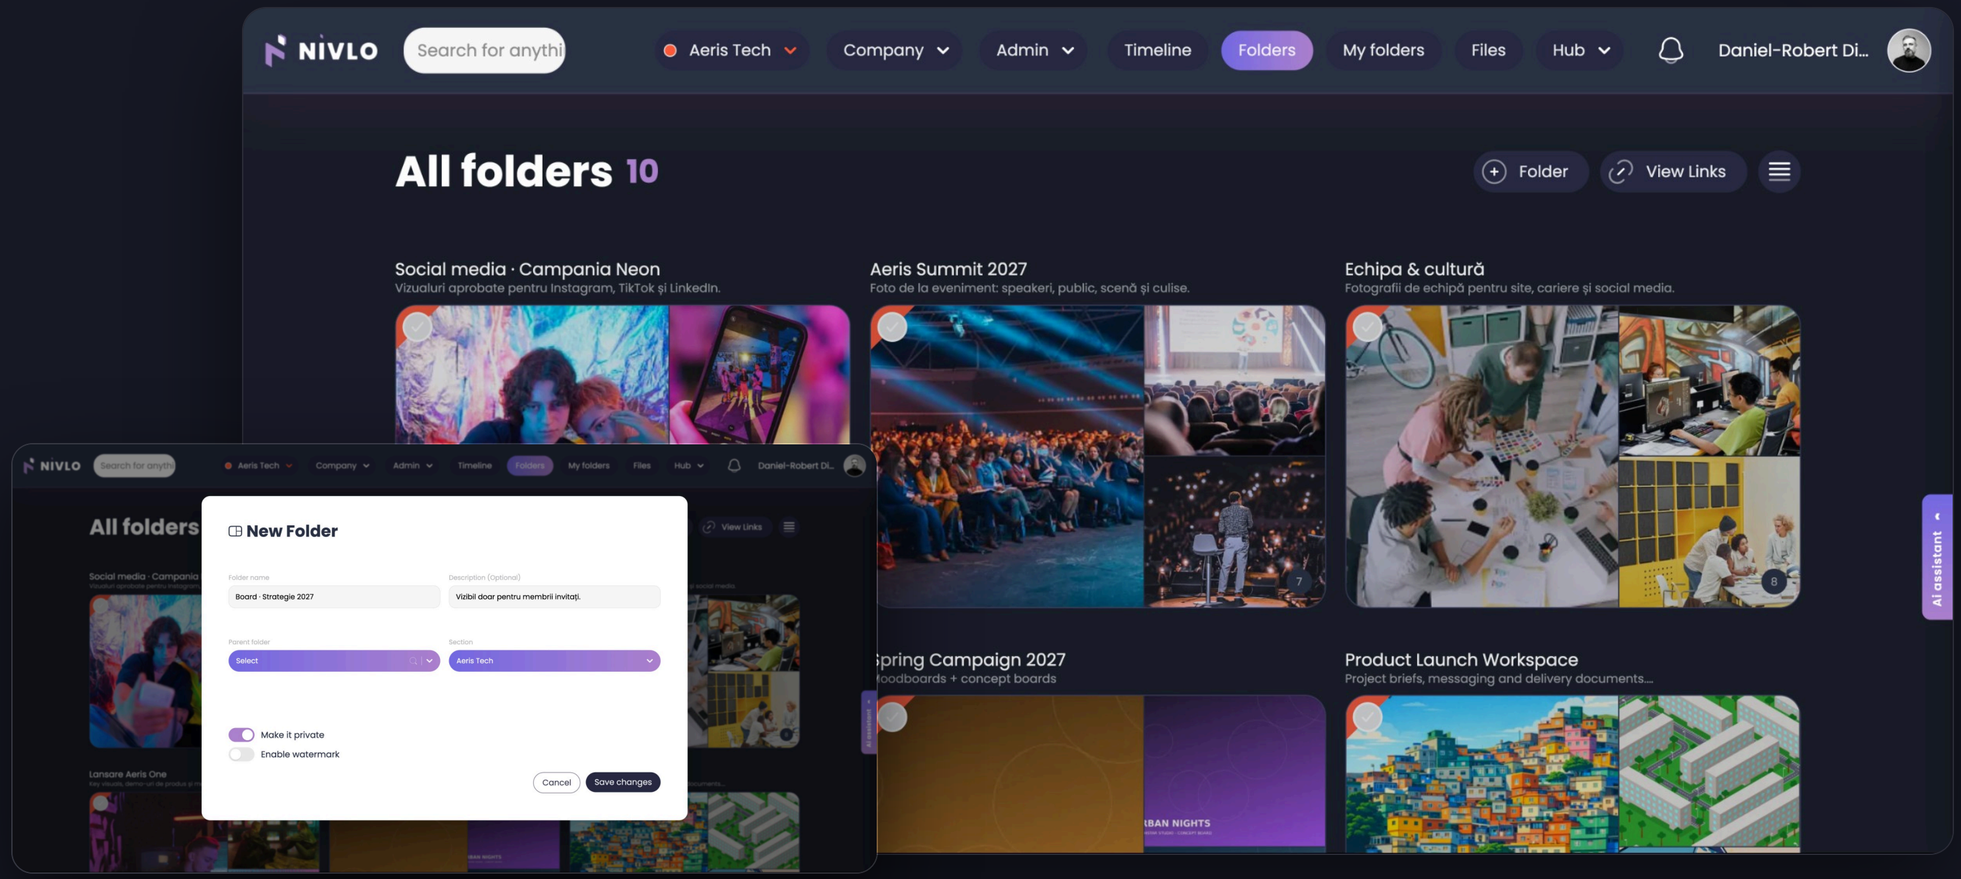

- One search for **files, folders, users and tags**.
- Filters for upload date, file type, section and author. Frequent searches can be saved.
- Tags go on the whole batch right after upload, or automatically with AI auto-tagging.

2 · WORKSPACE

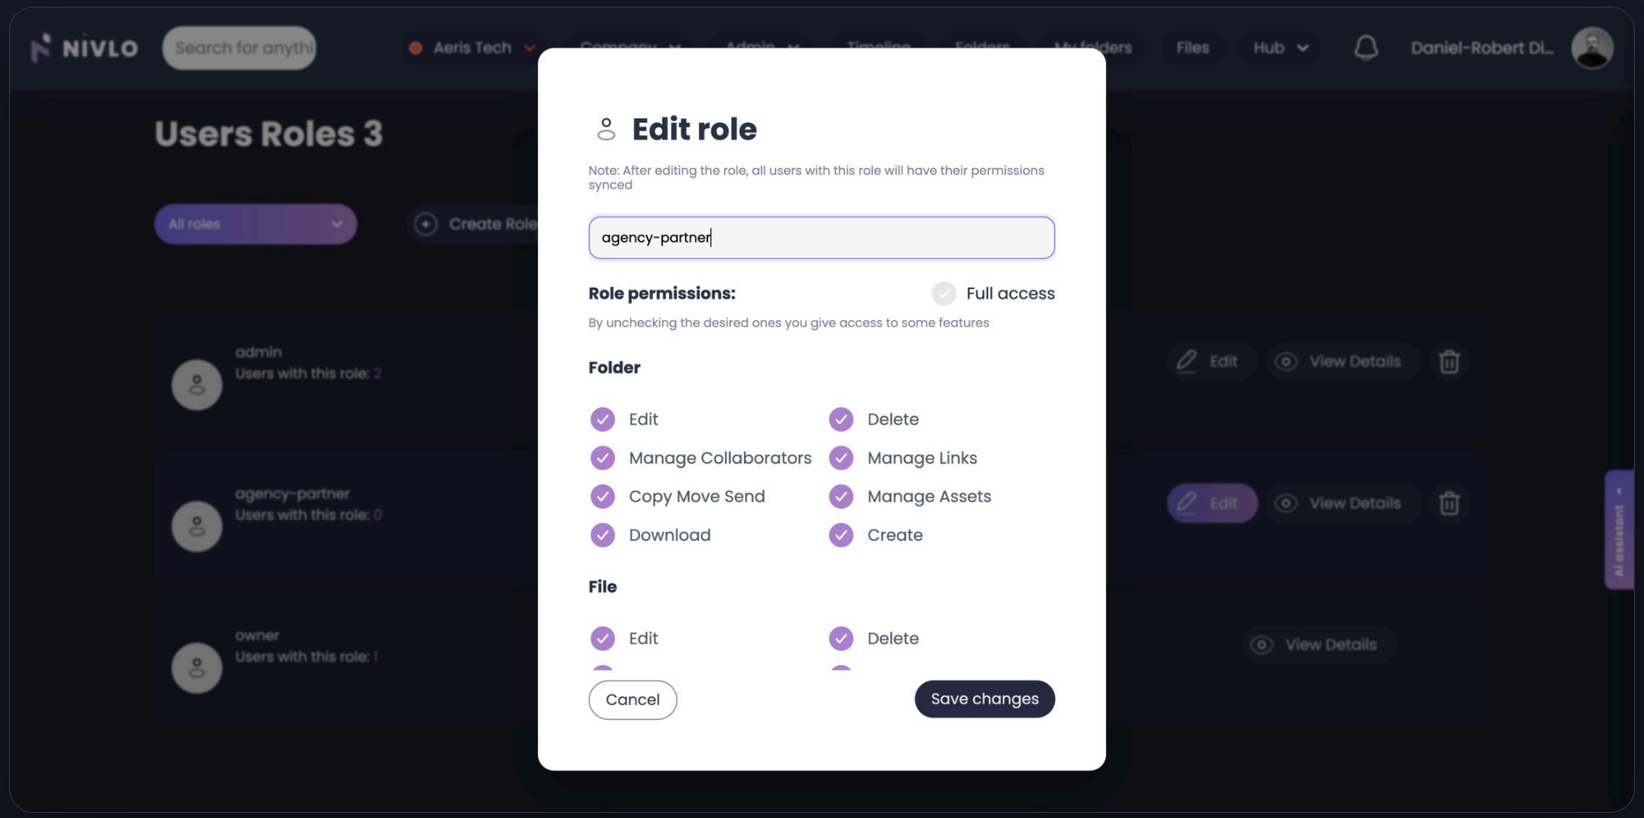

Sections and folders, public or private

- **Sections** separate materials by department, brand or client, each with its own members.
- A folder can be **private**, visible only to the people invited, or open to the whole section.
- The section selector in the menu filters the whole platform instantly.

Everyone sees and does only what they need

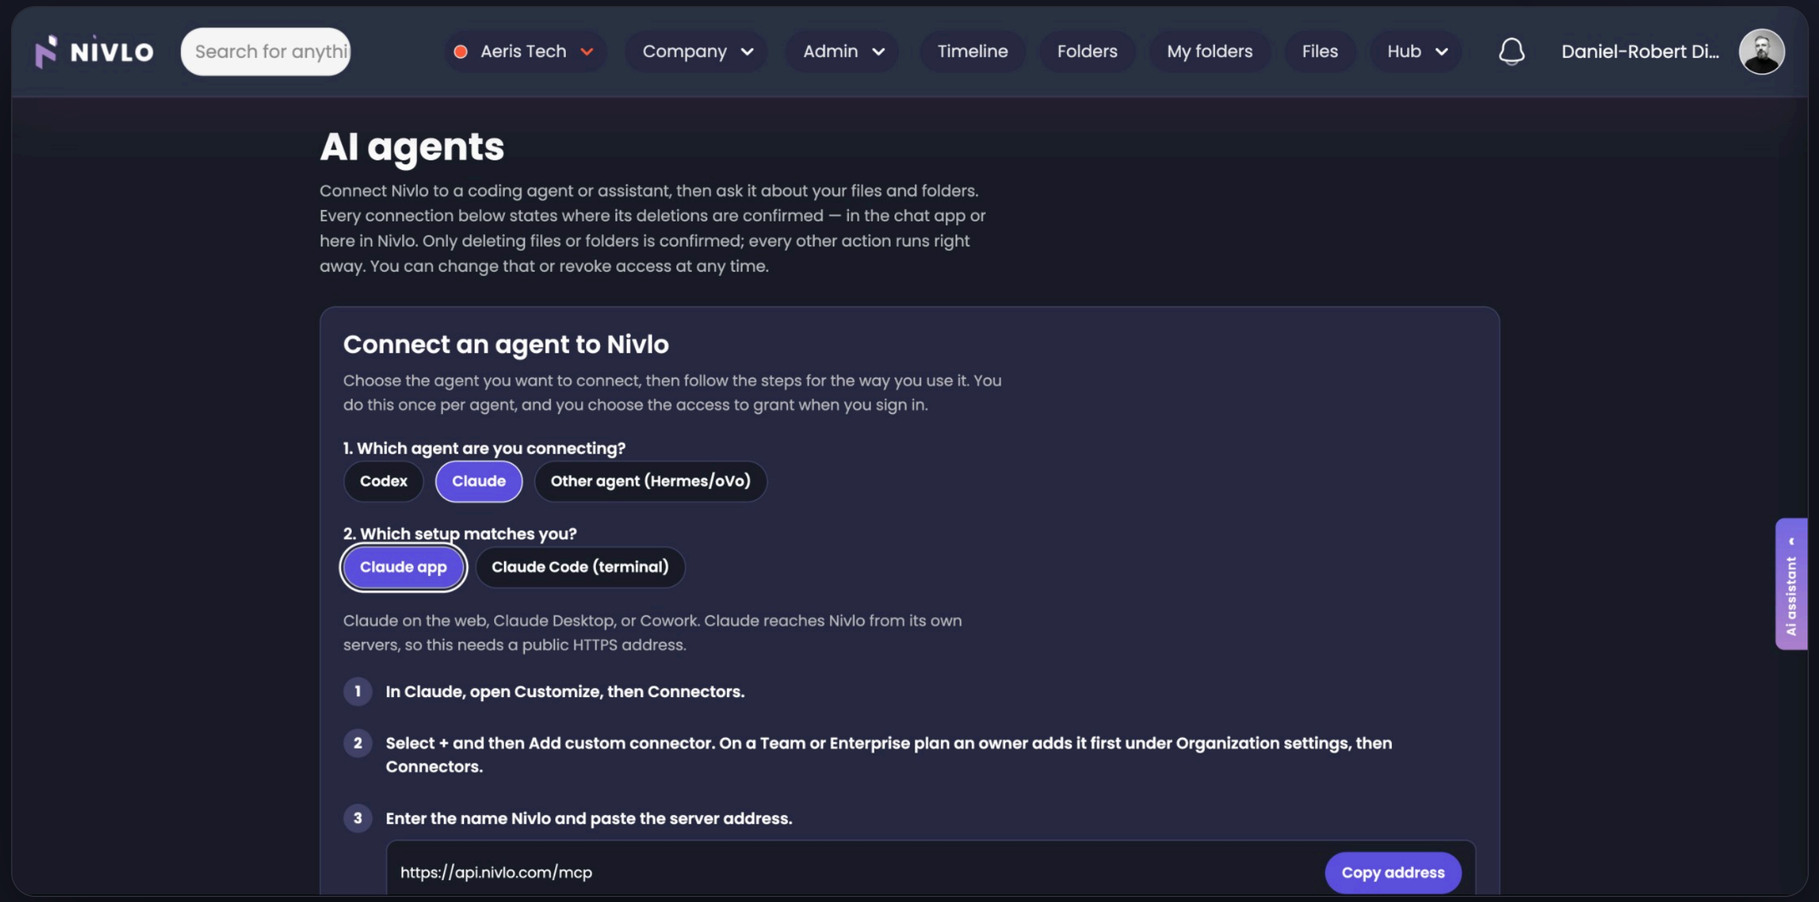

- Custom roles, for example **agency-partner**, with separate permissions for folders and files.
- Granular permissions: edit, delete, download, share, comment, manage links and collaborators.
- Access is given per section: a partner sees only the section of the brand they work with.

3 · AI AGENTS

Your library, within reach of your agents

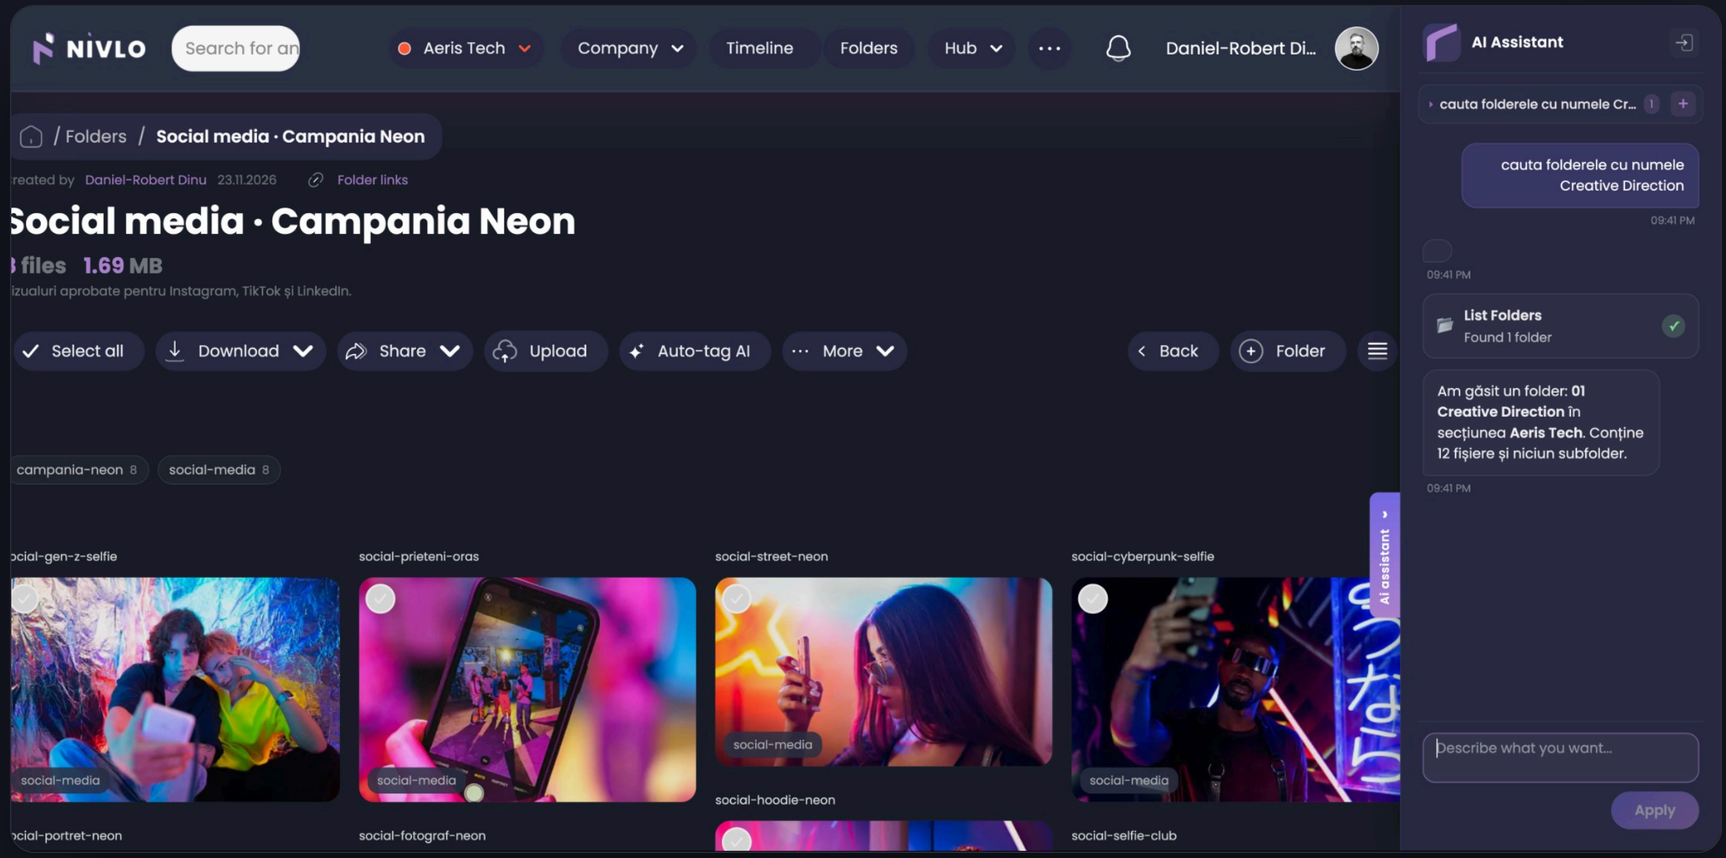

- Connect **Claude, Codex** or other agents through MCP and ask them to search, organise or send files.
- You choose what access the agent gets when you connect it.
- Deletions require confirmation, and access can be revoked at any time.

3 · AI ASSISTANT BETA

Ask in plain words, see the result in the interface

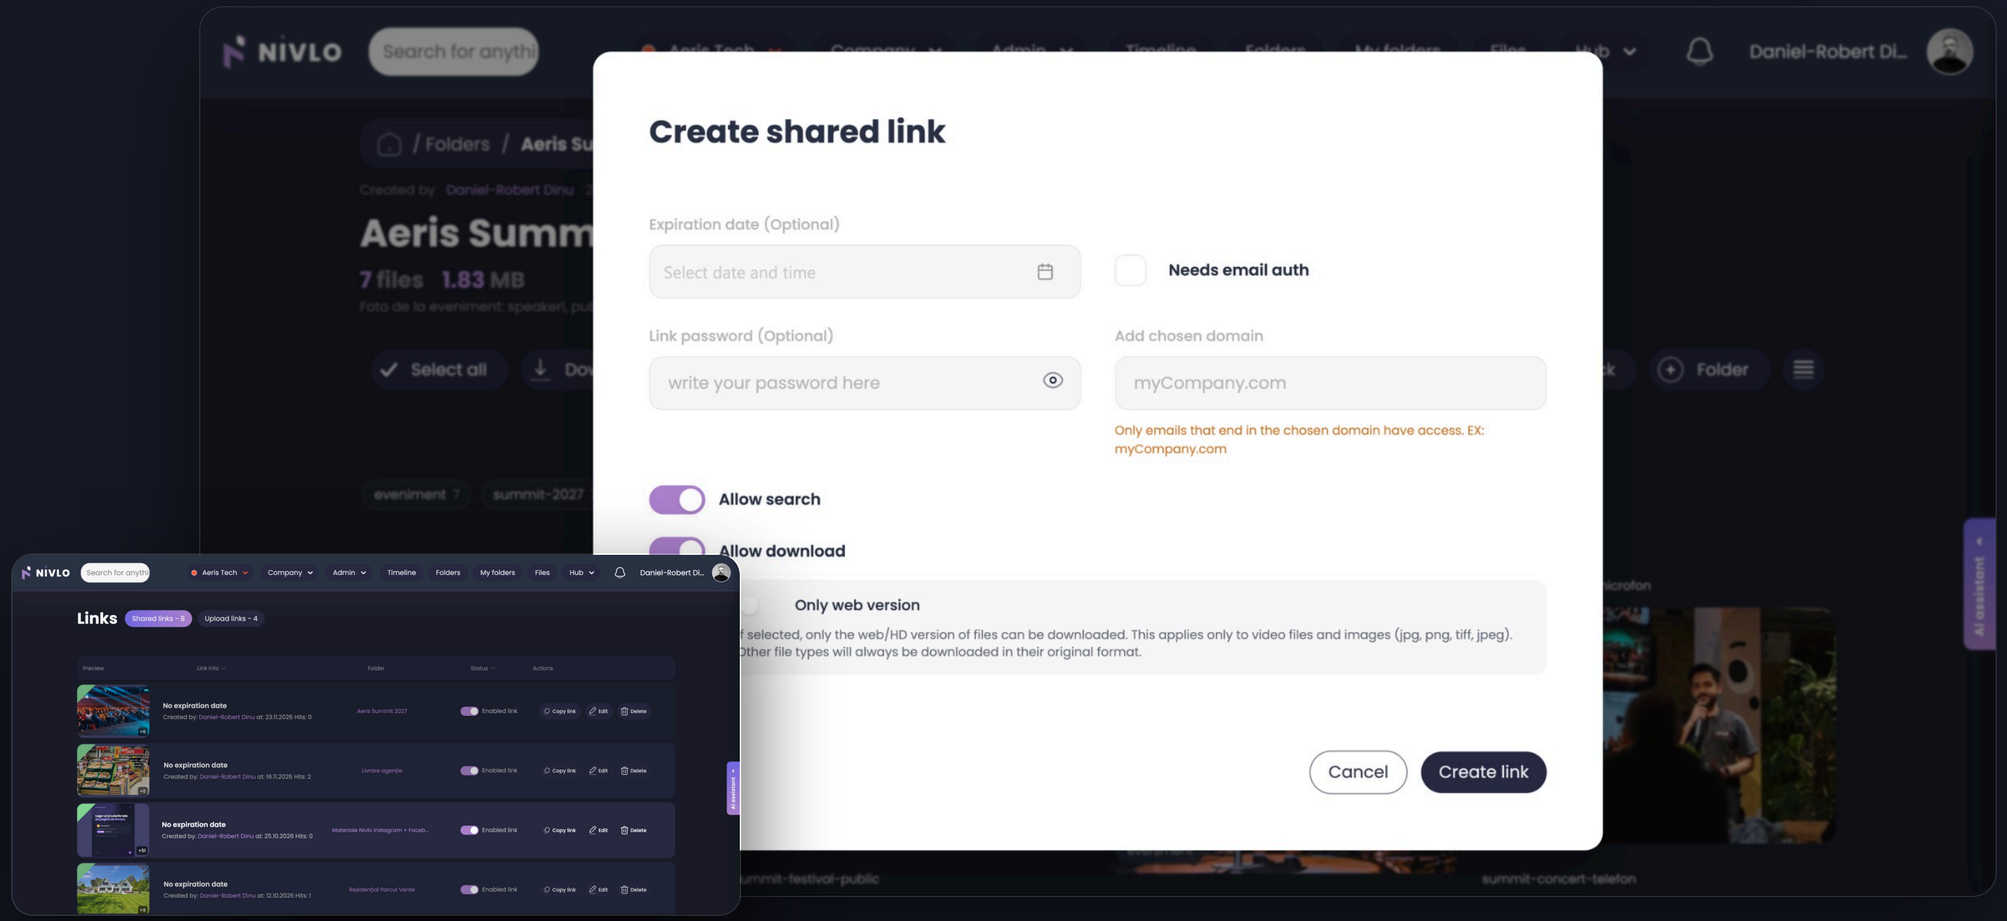

- The in-app assistant takes requests in natural language, for example **“find the folders named Creative Direction”**.
- Every action shows up in the conversation and in the interface, so you know exactly what was done.
- This feature is in beta and we keep testing it.

4 · LINKS

Sharing with fine-grained control

- A link for one file, a selection or a whole folder.
- **Expiry, password**, access only for specific emails or domains, search inside the link, download allowed or web version only.
- Any link can be disabled at any time and shows how many times it was opened.

4 · LINKS

One link for the client. You change what is behind it.

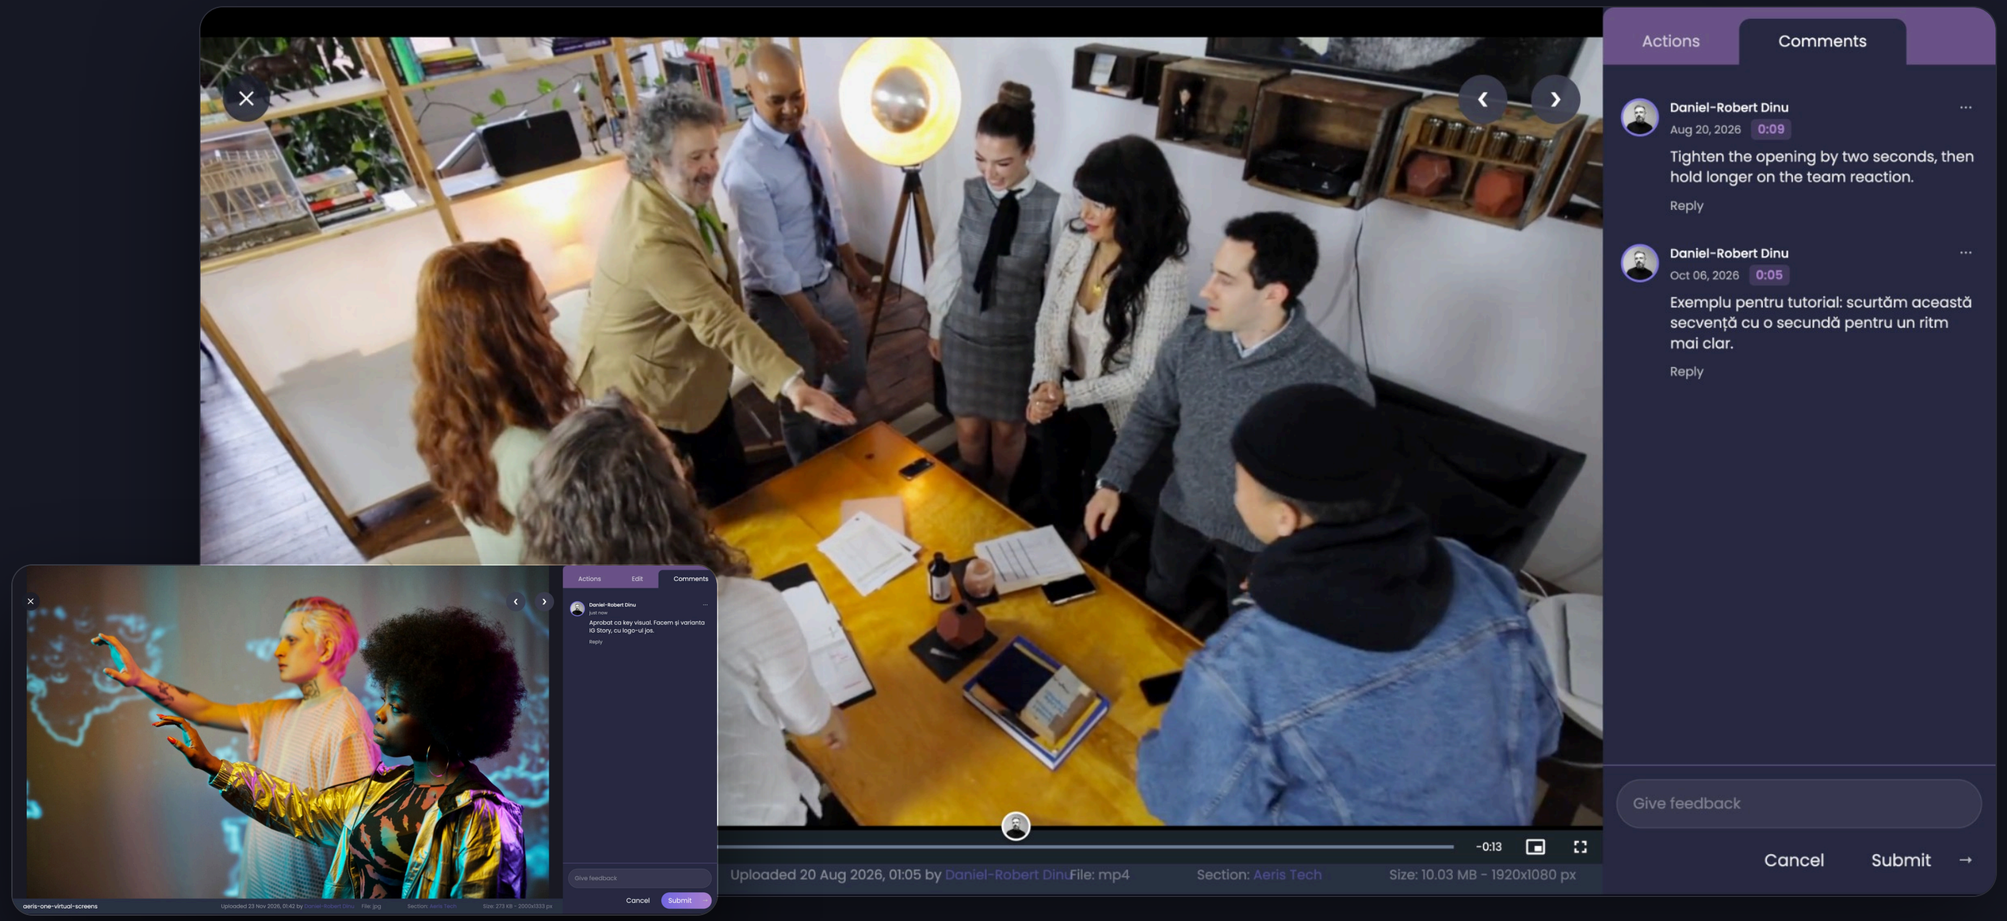

- Add, remove or reorganise files and subfolders, and **the link you sent stays the same**.
- With **Upload new version** you replace a file, and the client sees the new version automatically.
- Anything can sit behind the same link: images, video, documents or whole folders.

5 · FEEDBACK

Timecoded comments, and comments on any file

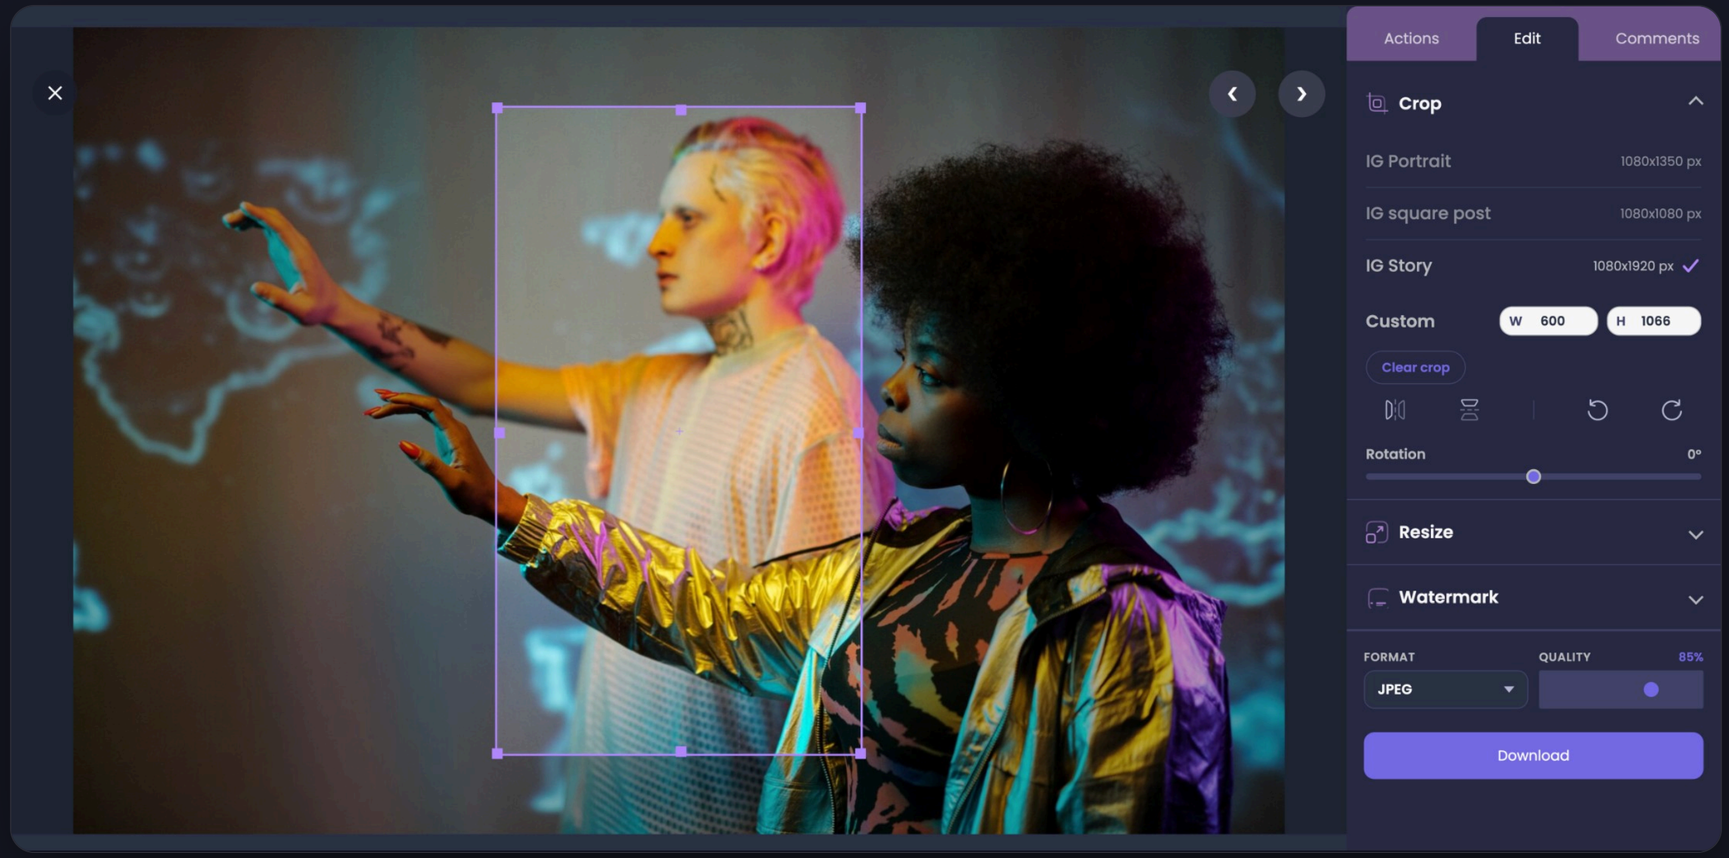

- On video, every comment keeps the exact moment (for example **0:09**) and shows as a marker on the timeline.
- Comments with replies and mentions on images, PDFs and any other file type.
- Comments stay attached to the version they were written on.

6 · SOCIAL MEDIA

The right format for every channel

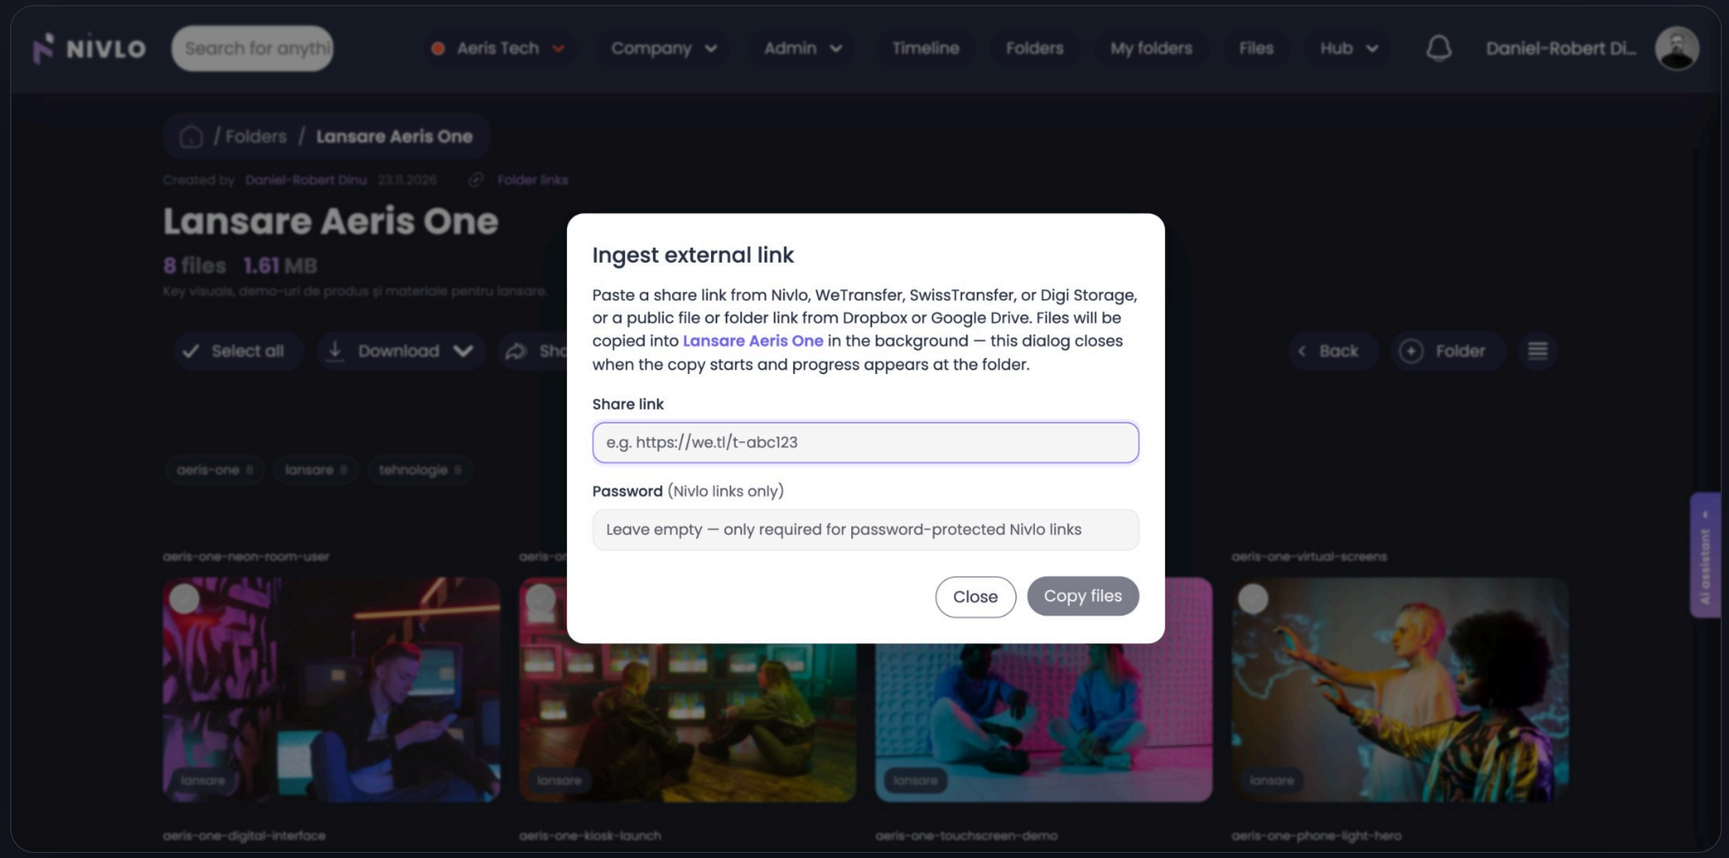

- Crop with ready-made formats: **IG Portrait, IG square post, IG Story** or your own sizes.
- Rotate, flip, resize and watermark.
- Export JPEG at the quality you choose, or download the web version directly. The original stays unchanged.

7 · IMPORT FROM A LINK

Files you receive go straight into the folder

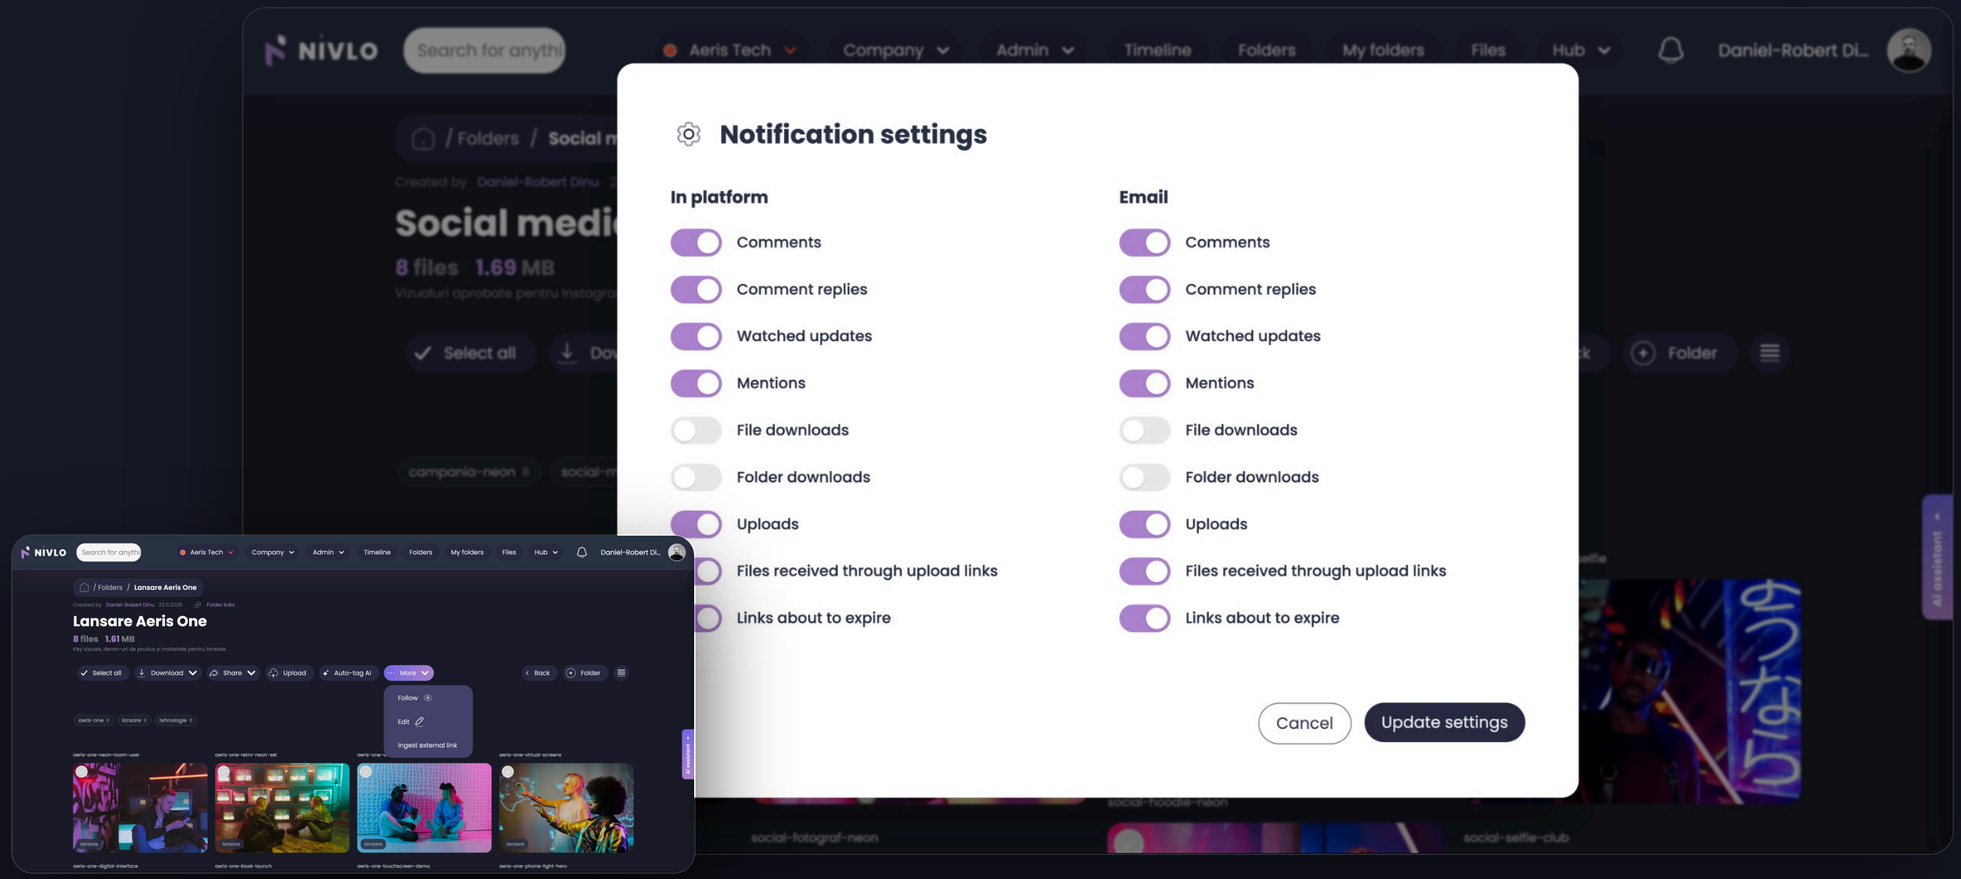

- Paste a link from **WeTransfer, SwissTransfer, Digi Storage, Dropbox, Google Drive** or Nivlo.
- The files are copied in the background straight into the chosen folder, with no download to your computer.
- Progress shows in the folder, and the materials can be tagged right away.

8 · NOTIFICATIONS

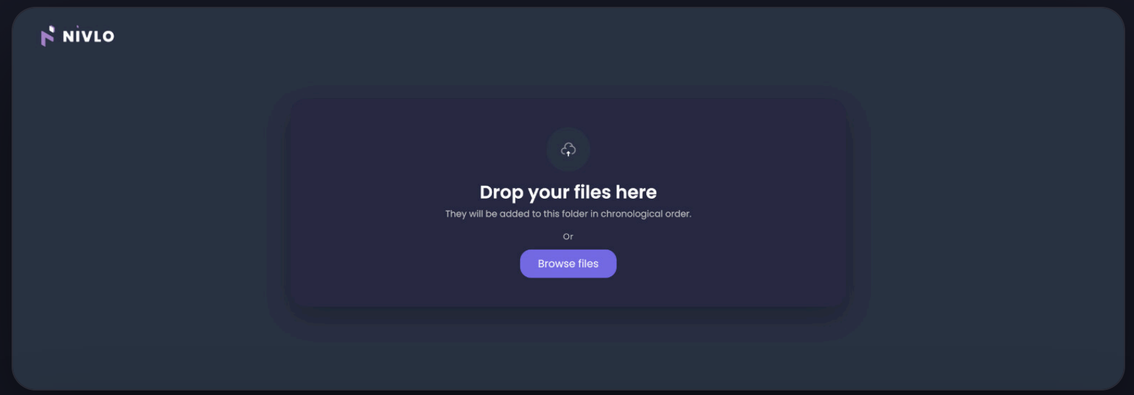

Know as soon as something new arrives

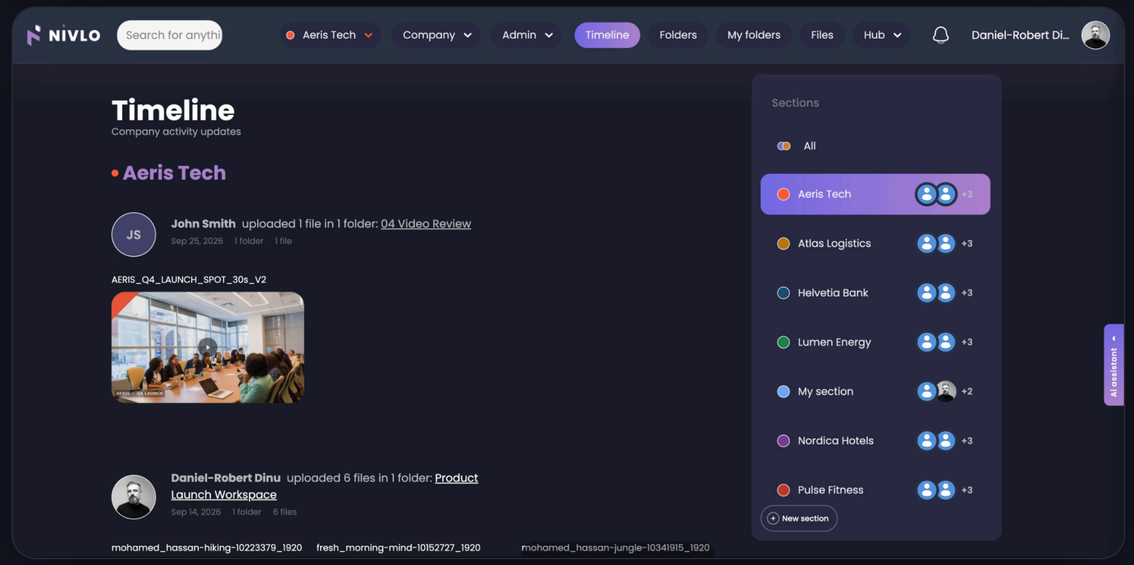

- Notifications for **uploads**, files received through upload links, comments, replies and mentions.
- **Follow** a folder and hear about every new version.
- Each user chooses what they get in the platform and what by email, including alerts for expiring links.

AND MORE

The details that keep work moving

Upload link

Clients and suppliers send files without an account, straight into the chosen folder.

Timeline

The activity feed by section: who uploaded what, and where.

Versions

The version history stays available for every file.

Large downloads

Folders and selections download as ZIP archives, with visible progress.

Recovery

Deleted files and folders go to the trash and can be restored.

Professional formats

Photo, video, audio, PDF and working formats such as PSB, LRV, INSV or SRT.

SECURITY AND ADMINISTRATION

Built for companies

Separate data

Each company has its own database, separate from every other company.

Controlled access

Roles, sections, private folders and links with password, expiry and email or domain restrictions.

Agents under control

You choose what access each AI agent gets, and deletions require confirmation.

NIVLO

Find the file. Send it. Move on.

Find

Search with filters and tags across the whole library, in the app or through AI agents.

Control

Sections, private folders, roles and permissions for every person.

Deliver

One controlled link, with content you can update at any time.
